

	Reception	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Scientific Enquiry Working Scientifically	Early Learning Goals Explore the natural world around them, making observations and drawing pictures of animals and plants. • Know some similarities and differences between the natural world around them and contrasting environments, drawing on their experiences and what has been read in class. • Understand some important processes and changes in the natural world around them, including the seasons and changing states of matter Science is linked to current topic and children's interests.	Ask simple questions Observe closely using simple equipment Perform simple comparative tests Identify, sort, group and classify Use my observations to help me suggest answers to questions With guidance, begin to notice patterns and relationships Observe simple changes over time Find information using simple secondary sources	Ask simple questions Observe closely using simple equipment Perform simple comparative tests Identify, sort, group and classify Use my observations to help me suggest answers to questions Gather and record simple data to help me answer questions With guidance, begin to notice patterns and relationships Observe simple changes over time Find information using simple secondary sources Communicate ideas in a variety of ways	Ask relevant questions and using different types of scientific enquiries to answer them. Set up simple practical enquiries, comparative and fair tests. Make systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers. Gather, record, classify and present data in a variety of ways to help in answering questions. Record findings using simple scientific language, drawings, labelled diagrams, keys, bar charts and tables. Report on findings from enquiries, including oral and written explanations, displays or presentations of results and	Ask relevant questions and using different types of scientific enquiries to answer them. Set up simple practical enquiries, comparative and fair tests. Make systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers. Gather, record, classify and present data in a variety of ways to help in answering questions. Record findings using simple scientific language, drawings, labelled diagrams, keys, bar charts and tables. Report on findings from enquiries, including oral and written explanations, displays or presentations of results and	Plan different types of Scientific enquiries to answer questions including recognising and controlling variables where necessary. Take measurements, using a range of scientific equipment, with increasing accuracy and precision taking repeated readings where necessary. Record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs. Use test results to make predictions to set up further comparative and fair tests. report and present findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as	Plan different types of Scientific enquiries to answer questions including recognising and controlling variables where necessary. Take measurements, using a range of scientific equipment, with increasing accuracy and precision taking repeated readings where necessary. Record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs. Use test results to make predictions to set up further comparative and fair tests. report and present findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as

				Use results to draw simple conclusions, make predictions for new values, suggest improvement and raise further questions. Identify differences, similarities or changes related to simple scientific ideas and processes. Use straightforward evidence to answer questions and support findings.	Use results to draw simple conclusions, make predictions for new values, suggest improvement and raise further questions. Identify differences, similarities or changes related to simple scientific ideas and processes. Use straightforward evidence to answer questions and support findings.	identify scientific evidence that has been used to support or refute ideas or arguments.	identify scientific evidence that has been used to support or refute ideas or arguments.
Life processes and living things	Understanding of the World	Identify and name a variety of wild and common garden	Observe and describe how seeds and bulbs grow into mature	Identify and describe the functions of different parts of			
PLANTS	Draw information from a simple map. Explore the natural world around them. Describe what they see, hear and feel while outside. Recognise some environments that are	plants, including deciduous and ever green trees. Identify and describe the basic structure of a variety of common flowering plants, including trees.	Find out and describe how plants need water, light and a suitable temperature to grow and stay healthy.	flowering plants: roots, stem/trunk, leaves and flowers. Explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant.			

	different to the ones in which they live.		Investigate the way in which water is transported within plants. Explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal.			
Living Things and their habitats	Understanding of the World Draw information from a simple map. Explore the natural world around them. Describe what they see, hear and feel while outside. Recognise some environments that are different to the ones in which they live.	Explore and compare the differences between things that are living, dead, and things that have never been alive. Identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other. Identify and name a variety of plants and animals in their habitats, including microhabitats. Describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food.		Recognise that living things can be grouped in a variety of ways. Explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment. Recognise that environments can change and that this can sometimes pose dangers to living things.	Describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird. Describe the life process of reproduction in some plants and animals.	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals. Give reasons for classifying plants and animals based on specific characteristics.

		body and say which					
		part of the body is					
		associated with each					
		sense.					
Life Processes							Recognise that living
							things have changed
Evolution and							over time and that
Inheritance							fossils provide
							information about
							living things that
							inhabited the Earth
							millions of years ago
							Recognise that living
							things produce
							offspring of the same
							kind, but normally
							offspring vary and are
							not identical to their
							parents.

						Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.
Physical Processes	Explore the natural world around them.	Observe changes across the four				
Seasonal Changes	Describe what they see, hear and feel	seasons. Observe and describe				
	while outside.	weather associated with the seasons and				
	Understand the effect of changing seasons on the natural world around them.	how day length varies.				
Materials and their properties	Explore the natural world around them. Describe what they see, hear and feel whilst outside.	Distinguish between an object and the material from which it is made. Identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock. Describe the simple physical properties of a variety of everyday materials. Compare and group together a variety of everyday materials on the basis of their simple physical properties	Identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses. Find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching.	Compare and group materials together, according to whether they are solids, liquids or gases. Observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C). Identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature.	Compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets. Know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution. Use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating.	

				Give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic. Demonstrate that dissolving, mixing and changes of state are reversible changes. Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.	
Rocks			Compare and group together different kinds of rocks on the basis of their appearance and simple physical properties. Describe in simple terms how fossils are formed when things that have lived are trapped within rock. Recognise that soils are made from rocks and organic matter.		
Light	Understanding of the World		Recognise that they need light in order to see things and that		Recognise that light appears to travel in straight lines.
